

// ONE BRAND // ONE SOURCE // ONE SYSTEM

DBP WEARTECH - A new benchmark for conveyor belt cover durability

DBP conveyor belts can be used in a wide range of industries. The specific cover stock properties and the belt design depend on the application. In addition to our range for conveying bulk material, special grades are also available for special applications.

DBP WEARTECH

A new benchmark for conveyor belt cover durability

This conveyor belt cover aims at meeting the needs of conveying systems in different areas of application with its combination of tensile strength, abrasion resistance and elasticity. DBP cover stocks are in a class of their own when it comes to application suitability. The mechanism leading to conveyor belt wear, is extremely complex. The conveyor belt surface is exposed to the impact of materials of varying sizes, shapes and surface structures at variable speeds. The operating conditions also have an influence on the degree of wear.

Properties

- Insensitive to moisture
- Perfect belt surface
- High degree of resistance to abrasion for normal operating conditions
- No press-reliant heat transition
- Optimum belt grading on the belt system
- Effective troughability

Areas of application

- Can be used in relevant industries, e.g. cement, gravel and sand, natural stone, recycling or coal transport
- Can be used in medium applications

Technical data

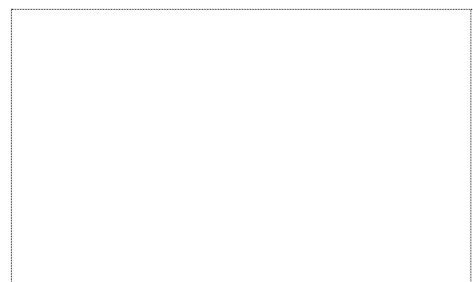

Cover plate	Cover plate class		Temperature range °C			Polymer-based
	Abrasion < mm ³	Min. elongation at break in %	Min. ambient temperature	Constant material temperature	Max. temporary material temperature	
AA*	130	400	-30	80	90	SBR

Delivery programme

Belt type	Min/max available widths in mm
DBP WearTECH 400/3 4+2 AA	650 - 1600 mm
DBP WearTECH 400/3 6+2 AA	650 - 1600 mm
DBP WearTECH 500/4 5+2 AA	650 - 1600 mm
DBP WearTECH 630/3 6+2 AA	650 - 1600 mm
DBP WearTECH 630/4 8+3 AA	650 - 1600 mm
